

HASEEB TARIQ

AI/ML Engineer | Generative AI | Azure AI | LLM Applications

Pakistan • contact.haseebtariq@gmail.com

PROFESSIONAL SUMMARY

AI/ML Engineer specializing in Generative AI, LLM applications, RAG systems, and cloud-native AI solutions. Microsoft Certified Azure AI Engineer Associate with hands-on experience designing and deploying production-oriented AI applications using Python, Azure OpenAI, Azure AI Search, LangChain, LlamaIndex, and modern LLMs. Experienced in building Agentic RAG, multi-agent workflows, AI SaaS platforms, intelligent document systems, and automated AI pipelines. Proven track record of improving model performance, reducing manual workflows, and delivering scalable AI solutions from data ingestion and retrieval through production deployment.

TECHNICAL SKILLS

Programming: Python, JavaScript/Node.js, PHP/Laravel, Java

Generative AI & LLMs: Azure OpenAI, Gemini, Groq, LLaMA, QLoRA Fine-Tuning, Prompt Engineering, Context Engineering, Model Evaluation

AI/ML: TensorFlow, scikit-learn, NLP, Text Classification, Named Entity Recognition, Sentiment Analysis

AI Architecture: RAG, Agentic RAG, Multi-Agent Systems, MCP, Function Calling, A2A, Vector Search, Embeddings, Chunking Strategies

AI Frameworks: LangChain, LlamaIndex, Agno, Pydantic, Spring AI

Microsoft Azure: Azure OpenAI Service, Azure AI Search, Azure Machine Learning, Azure App Service, Azure Data Factory

Backend & APIs: FastAPI, REST APIs, Node.js, Laravel

Databases: PostgreSQL, MongoDB, MySQL, Vector Databases

MLOps & DevOps: MLflow, Docker, Experiment Tracking, Model Evaluation, AI Microservices

Cloud: Microsoft Azure, AWS EC2, AWS Lambda

Automation & Analytics: Selenium, Google Apps Script, Power BI

PROFESSIONAL EXPERIENCE

AI/ML Developer Intern | Mahmood Group of Industries | Jul – Aug

- Architected and deployed cloud-native AI applications on Microsoft Azure, integrating Azure OpenAI and Azure AI Search for intelligent document retrieval and enterprise knowledge management.
- Designed and developed a multi-tenant AI-powered SaaS platform for WhatsApp restaurant ordering using Node.js, Laravel, Groq LLaMA-3.3-70B, and conversational AI orchestration.
- Built end-to-end RAG pipelines incorporating document chunking, vector embeddings, retrieval strategies, and real-time data integration to improve LLM response accuracy and reduce hallucinations.
- Developed agentic AI workflows using MCP and function calling/A2A patterns to automate complex multi-step interactions across enterprise data sources.
- Applied advanced prompt and context engineering, including few-shot prompting and system prompt design, to improve model output quality across production AI workflows.
- Integrated Azure Data Factory pipelines for real-time data ingestion supporting AI/ML inference workflows across multiple business units.
- Implemented MLflow-based experiment tracking and model evaluation to improve reproducibility, optimization, and monitoring of AI experiments.
- Containerized AI microservices with Docker and deployed production services through Azure App Service.

AI/ML Engineer | Independent / Freelance | 2023 – Present

- Developed an AI Sales Intelligence Tool using QLoRA fine-tuning on TinyLlama-1.1B, FastAPI, PostgreSQL, MongoDB, and MLflow.
- Improved lead-scoring accuracy by 40% compared with a baseline rule-based system through iterative model evaluation and optimization.
- Developed NLP pipelines using scikit-learn and TensorFlow for text classification, named entity recognition, and sentiment analysis across diverse datasets.
- Automated AI content-generation workflows using LLM-driven scripting integrated with Kling AI, Runway Gen-3, and Wan 2.1/2.6, reducing content production time by 70%.
- Built automated data scraping and processing pipelines using Selenium and Google Apps Script, with results analyzed and visualized through Power BI dashboards.

SELECTED AI PROJECTS

Multi-Tenant WhatsApp AI SaaS Platform | *Personal Project*

- Built a multi-tenant conversational AI platform for restaurant ordering using Groq LLaMA-3.3-70B, Node.js, Laravel REST API, and MySQL.
- Designed AI-driven conversational workflows for restaurant ordering, menu discovery, order-state management, and menu variant resolution.
- Implemented context engineering and conversational state management to maintain accurate multi-turn customer interactions.
- Developed AI-driven owner and customer WhatsApp notification workflows for real-time order communication.

AI Sales Intelligence Tool | *Personal Project*

- Fine-tuned TinyLlama-1.1B using QLoRA on domain-specific sales data.

- Deployed the fine-tuned model through FastAPI with PostgreSQL and MongoDB backends.
- Integrated MLflow for experiment tracking, evaluation, and model optimization.
- Achieved a 40% improvement in lead-scoring accuracy compared with the baseline rule-based approach.

RAG-Powered Document Q&A; System | *Personal Project*

- Designed an end-to-end RAG system using LlamaIndex, Azure AI Search, and Azure OpenAI embeddings.
- Implemented advanced document chunking, embeddings, and vector-search strategies for enterprise document intelligence.
- Developed Agentic RAG with function calling to support multi-hop reasoning across heterogeneous document sources.
- Applied production-oriented Azure AI Search patterns for scalable document retrieval and LLM-powered question answering.

CERTIFICATION

Microsoft Certified: Azure AI Engineer Associate | Microsoft • Active

EDUCATION

Bachelor of Science in Information Technology | Bahauddin Zakariya University, Multan, Pakistan • 2023

Relevant Coursework: Machine Learning, Data Structures & Algorithms, Database Systems, Software Engineering, Cloud Computing, Natural Language Processing

LANGUAGES & AVAILABILITY

English: Professional Working Proficiency | Urdu: Native | Availability: Immediately available for full-time remote opportunities, including EU time zones.
